

Vegan Tested by SGS

Test your cosmetics & hygiene products to support vegan claims

Vegan Tested by SGS

Cosmetics & Hygiene

The global rising trend of veganism goes hand in hand with the demand for authentic Vegan products. Vegan consumers want to be sure they are really buying animal-free products and sellers need to support Vegan claims.

VEGAN TESTED BY SGS IS A COMPLETE PRODUCT ANALYSIS

STEP 1 | DOCUMENTATION

We will review documentation concerning final product, raw-materials, packaging and others considered relevant, to ensure animal-free origin.

STEP 2 | ANIMAL DNA DETECTION

Samples will be tested to detect animal DNA, using dPCR and NGS. Using this test we can identify several species of meat, fish, bivalves, crustaceans, mollusc and insects, in the samples.

STEP 3 | FINAL REPORT

We will provide a final report, with conclusions of documentation review and animal DNA detection test. Final conclusion will be presence or absence of animal traces in the product. This report can be used to support Vegan claims.
